Work Experience

MaxQ Accelerator August 2016

An organization that provides space start-ups with funding and connections to industry professionals.

- Software Developer Created an API that returns satellite data in JSON and parsed HDF files into a Postgres Database.

The Fountain of Love and Life July – August 2015

An organization that produced film and music for the Ontario Fairchild television station with an audience of more than 1 million

- Plugin Developer Designed and developed a PHP plugin to transform excel files into WordPress posts, enabling a better management of all company announcement files.

Toronto Hacker Club September 2015 - Present

A youth-lead organization that organizes hackathons and workshops for over 300 student participants in the Greater Toronto Area.

- Director of External Affairs Corresponded with a variety of organizations to source potential sponsors and assisted participants at events with technical issues.

Projects

FinTech – Finding the Asian Carp

Structured an IBM Bluemix database to arithmetically predict the spawning of Asian Carp in the great lakes using water temperature and flow data.

Syncurio – Access Control System Using Facial Recognition

Utilized machine learning to recognize and store familiar faces in IBM Bluemix. Implemented a Node server to notify landlords of unrecognized faces from a home security camera.

Achievements

Hack the North Winner – September 2016

Won against 1000 competitors at Canada's largest hackathon in Waterloo.

STEM Fellowship Big Data Challenge Winner – February 2017

Placed first against 21 teams with an abstract that proposes solutions to combat forest fires (journal.stemfellowship.org/toc/sfj/3/1).

Personal Goals

Long term: To establish a career in data analytics

Short term: To acquire a position within the tech industry where I can utilize my ability to adapt and collaborate to develop innovative applications.

Education

Pierre Elliot Trudeau HS

ICS3U Grade 11 Computer Science

ICS4U Grade 12 Computer Science

Skills

Jupyter, Databricks, IntelliJ
Python
Javascript, NodeJS, Angular
C++, Java
Bash, Vim
Postgres, MySQL
